

## Schletter plastic end caps

- Attractive design impresses the customer
- Accident prevention - the sharp edges of the rails cannot hurt anybody
- Noise caused by the wind is reduced

Beautiful and practical: Schletter offers plastic end caps for the Solo05, SoloLight and Profi05 profiles. Like this, all rail channels can be closed simply and easily. This does not only impress the customer but also reduces the risk that the workers hurt themselves at the ends of the profiles (rails). The end caps also have a noise-reducing effect. Closing the profiles prevents whistling of the wind - that's a real plus in residential areas.

If you purchase 10,000 end caps or more, the caps will be labelled with your company logo.

**Item No. 129011-000** with Schletter logo silver

**Item No. 129011-900** with Schletter logo black

**Item No. 129011-xxx** with your logo also available in green or red

Our staff members will be happy to give you further information.
